

Solution Up'n Rain®

How to pour or sprinkle ingredients (powder, grain, in parts) from a bag, a jar, or a tray?

Solution

Up'n rain, simple and intuitive as a saltcellar, one simple gesture to open, use and reclose many times! The system gives various pouring flows, so gives various possibilities to pour different gradings, more or less quickly. It is applied on the lidding film or on the packing film. This solution exists in the "clic" version, with a self locking hinge to keep the open position to pour or sprinkle without pollution of the adhesive.

Applications

- Agrifood and other industries
- Dry and fresh products (grain, greasy, in parts)
- Adapted to all kind of jars, trays and bags

Functionalities

- Convenience of the packaging
- Preservation of the contents
- Easy pouring or sprinkling
- Easy dosing

Industrial assets

- Low cost solution
- Innovative solution
- Customization with respect of the marketing identity
- No transformation of the production line. No reduction of the production rhythm
- Product's integrity guaranteed until full consumption
- Secured first opening thanks to tamper-proves and the hermetic cut of its lid
